India's Step Forward in the Neuromuscular Dentistry Revolution

“Measuring Occlusion and Muscle Physiology”

DATE : 25TH & 26TH AUGUST 2018 | VENUE : THE CAPITOL, BANGALORE

Abstract: The new patient experience includes an examination and a diagnosis for the establishment of a treatment plan. The evaluation of the dental occlusion and the stomatognathic system must be part of this process. This clinical case presents the use of Biometrics aids, such as the T-Scan (Tekscan), BioEMGs and BioJVA/JT (BioResearch), in the digital evaluation of a patient presenting signs and symptoms of occlusal stresses. The inclusion of these technologies provides the clinician with additional information and a different perspective that can help in the examination and diagnosis process.
