

1st ICCMO INDIA CONGRESS

India's Step Forward in the Neuromuscular Dentistry Revolution

"Measuring Occlusion and Muscle Physiology"

DATE : 25TH & 26TH AUGUST 2018 | VENUE : THE CAPITOL, BANGALORE

Abstract:

Poor oral habits frequently result in altered functions which, over time can cause dysfunction in craniofacial growth and development. To correct this, myofunctional therapy can be instrumental in helping patients to discontinue poor oral habits and recover the normal function and tone of oral muscles, including the tongue. We will discuss the need for providers to assess and refer patients with orofacial discrepancies, poor oral habits, and mouth breathing to a Myofunctional Therapist either as an independent treatment option or in collaboration with orthodontic treatment.
